

Microsoft Office

Choosing the right version

Choosing the right version of Microsoft can be confusing so we have made this simple guide to help.

(If you are a student please check with your school about getting Microsoft Office free through your school).

1. Choosing the right version.

The most useful version is Microsoft Office Professional Plus which includes Word, Excel, Power Point, Publisher etc, just about anything you might need.

This is similar to Office 365.

2. The difference?

You can make a one-time purchase of Microsoft Office Professional or Microsoft Home & Student for about \$70 online

Office 365 is a yearly subscription of about \$60

3. Where to buy. You can buy office through most retail stores and online through Microsoft.com.
4. Be wary cheap downloads and product keys online. If you aren't getting a cd with a new product key when purchasing, you may have trouble registering the product key.
